

# GearMaster

## Looking to Inspect a Larger Gear?

The GearMaster line of Double Flank Composite Testers is designed to inspect parts up to 26" diameter and up to 125 pounds. The precision machined solid cast iron base carries the headstock and tailstock slides. The headstock slide rides on crossed linear roller slides to ensure accuracy and repeatability of the measurement.

From the High Centers attachment to the Bevel Gear and Worm attachments the GearMaster line can be customized to suit virtually any application.

Contact the experts at Precision Gage Company to show you how the GearMaster Double Flank Composite Tester can provide value to your gear inspection.
